

Ground Level Ozone Research Project

Ozone Challenge: Decreasing Emissions Not Resulting in Decreasing Ozone

Hypotheses

- 1. Increased wildfire activity throughout western continental North America has significantly and consistently raised background ozone concentrations, higher exceedance day ozone concentrations, and more frequent ozone exceedance days in Intermountain West nonattainment areas.
- 2. Anthropogenic NO_x and VOC **emissions locally and nationally may not be decreasing as quickly as expected** by existing emission projections.
- 3. Biogenic sources of NO_x and VOC may be counteracting reductions from anthropogenic sources such that ambient NO_x and VOC concentrations may not be decreasing at the expected rate.
- 4. Changes in atmospheric ozone chemistry are impairing the impacts of reductions in manmade precursor emissions on expected reductions in policy-relevant ozone concentrations in Intermountain West nonattainment areas.

Hypotheses

- 5. Increases in transported ozone from outside Intermountain West nonattainment areas have contributed significantly to background ozone concentrations, higher exceedance day ozone concentrations, and more frequent ozone exceedance days.
- 6. Meteorological and climatological factors play a significant role in impairing the impacts of reductions in manmade precursor emissions on expected reductions in policy-relevant ozone concentrations in Intermountain West nonattainment areas.
- 7. Ozone concentrations above the 2015 EPA NAAQS (70 ppb) in the Intermountain West nonattainment areas (Phoenix, Salt Lake, Las Vegas, Denver) are primarily the result of a combination of regional factors (wildfires, transport, rising background, etc.) as opposed to local precursor emissions.
- 8. Intermittent natural gas flaring from oil production is adding combustion products and especially formaldehyde to the air column that is then transported around the Southwest.

The Plan

The three **scope areas** of the plan include **air pollution measurements**, emission **inventory verification**, and **data analysis** and **model evaluation**.

Organizations

- AZDEQ
- EPA

ASU

- Maricopa County
- Sonoma Tech
- Maricopa Association of
- NASA JPL
- Governments

Sites and Tools

- 7 sites, March-October
 - Automated gas chromatograph (Auto GCs) systems for measurement of C2-C12 (via C2-C6 and C6-C12 modules)
 - NO_v analyzers
 - NO_x analyzers
 - Other VOC monitoring
 - PANDORA
 - VOCUS Eiger
- 2 sites will have Small Mobile Ozone Lidar (SMOLs)April-August

2024 Revised Secondary (Welfare-Based) Sulfur Dioxide (SO₂) National Ambient Air Quality Standard

2024 Revised Secondary Sulfur Dioxide National Ambient Air Quality Standard

2012 Secondary SO₂ Standard

0.5 parts per million (ppm)
as a 3-hour average, not to
be exceeded more than
once a year.

2024 Secondary SO₂ Standard

Annual standard of 10 parts
per billion (ppb), averaged
over three years.

Boundary Recommendation Timeline and Process

Projected Timeline

July/August 2025

Proposed boundary recommendations posted; public hearing announced and comment period begins

Nov. 10, 2025

Final boundary recommendations and response to comments submitted to Governor Dec. 10, 2026

EPA designations are made final (may take up to one additional year)

Dec. 10, 2024

Revised Secondary SO₂ NAAQS Promulgated **August/September 2025**

Comment period ends and public hearing held

Dec. 10, 2025

Governor submits recommendations to EPA

2025 Concrete Batch Plant General Permit Renewal

CBP General Permit Program in Arizona

- General permits (GPs) ensure that the environment is protected from the effect of numerous, very similar, and generally smaller facilities
- The CBP GP allows facilities to produce concrete under air quality rules
- The CBP GP program serves more than 50 customers in Arizona

Production limitations under Current CBP GP

Scenario	Maximum Production Rate (Cubic Yards per Day)
Truck Mix Facilities with no Baghouse controlling emissions from the product loading point.	500
Truck Mix Facilities with a Baghouse controlling emissions from the product loading point.	2,000
Central Mix Facilities with no Baghouse controlling emissions from the product loading point.	2,000
Central Mix Facilities with a Baghouse controlling emissions from the product loading point.	2,000

Additionally, non-certified generators in Maricopa County shall be limited to combined brake horsepower of 750 HP

Proposed Changes

- The renewed Concrete Batch Plant General Permit will allow multiple concrete batch plants under the same ATO. This will allow Permittees to produce more than one type of product at a plant.
- The throughput limits have been updated to reflect the multiple concrete batch plant configuration. These new throughput limits were designed to not further restrict Permittees while achieving the same level of environmental protection.
 - CBP operations which have the equipment type, CBP Truck Mix without a Baghouse at the Product Loading Point: 500 yards³/ day
 - CBP operations which DO NOT have the equipment type, CBP Truck Mix without a Baghouse at the Product Loading Point: 2,000 yards³/ day

Renewal Process

- The renewal period is expected to open on May 22, 2025
- This renewal period will be open for 60 days. If the permit is not renewed in the renewal period, it will be considered expired
- myDEQ will send out reminders to renew the permit along with the deadlines
- The renewal process is performed through the myDEQ portal
- The renewal fee remains the same at \$500

Water Quality Division Update

Josephine Maressa
Deputy Director of Water Quality Division

Water Quality Division

Advanced Water Purification

Aquifer Water Quality Standards

Impaired Water Identification Rule

Total Maximum Daily Load

Advanced Water Purification

What is Advanced Water Purification?

Recycled or Reclaimed Water

Water that has been used more than once to expand a community's available water supply.

Potable Reuse

Use of recycled or treated reclaimed water that is safe for drinking.

May be accomplished directly or indirectly

Indirect Potable Reuse

Wastewater or reclaimed water is treated to drinking water levels and discharged into an "environmental buffer"

"Environmental buffer" is a natural depository such as a groundwater aquifer or surface water.

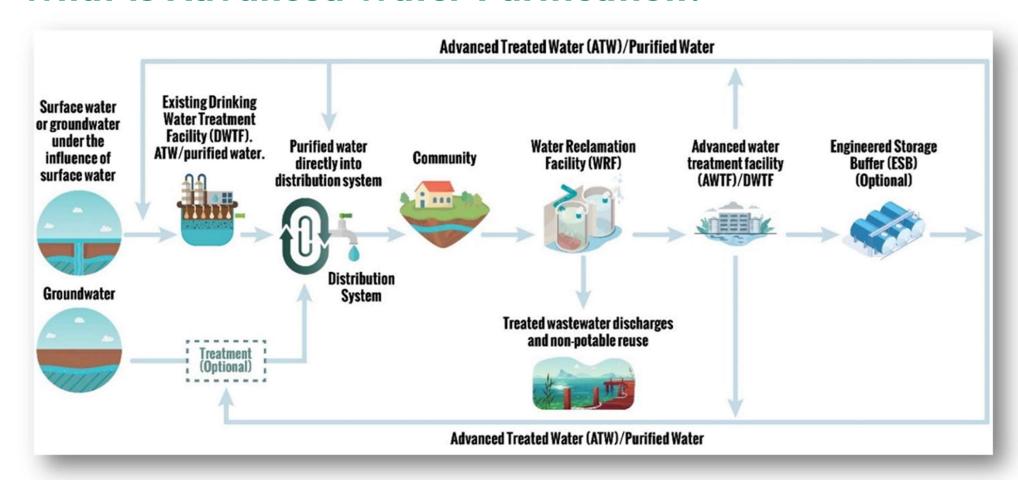

Direct Potable Reuse (DPR)

Water is treated and distributed as a drinking water supply without an environmental buffer

Purified water may be introduced directly into an existing drinking water treatment plant or distribution system

What is Advanced Water Purification?

AWP Program Components

AWP Rulemaking Timeline

Aquifer Water Quality Standards

Aquifer Water Quality Standards (AWQS)

- What are AWQSs?
 - Maximum contaminant levels, established for aquifers in the state of Arizona for the protection of drinking water usage and public health.
- How are AWQSs used?
 - Aquifer Protection Permits
 - Remediation Programs
 - WQARF
 - VRP
 - Underground Storage Tanks

What Standards Need to be Updated?

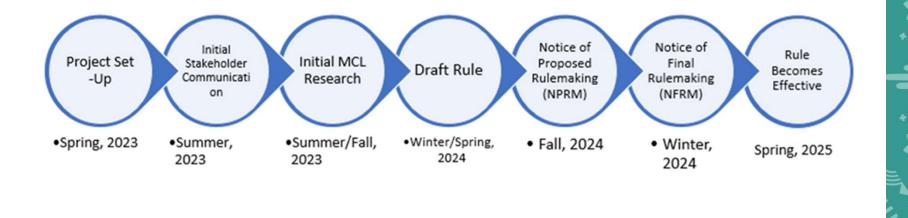

Pollutant	AWQS	MCL
Arsenic	0.05 mg/L	0.01 mg/L
Bromate	None	0.01 mg/L
Chlorite	None	1 mg/L
Haloacetic Acids	None	0.05 mg/L
Microbiological Contaminants	A.A.C. R18-11-406(F)	40 CFR 141.63(C)
Total Trihalomethanes	0.1 mg/L	0.08 mg/L
Uranium	None	30 μg/L

Rulemaking Update

- Notice of Proposed Rulemaking (NPRM) submitted to Secretary of State's Office - October, 2024
- 30 day Comment Period
- Currently developing Notice of Final Rulemaking (NFRM)
- Submit to the Governor's Regulatory Review Council -March 18, 2025

AWQS Rulemaking Critical Path

Impaired Waters Identification Rule (IWIR)

Impaired Waters Identification Rule (IWIR)

Established in 2002 | Stakeholder Engagement will soon start Recommended updates:

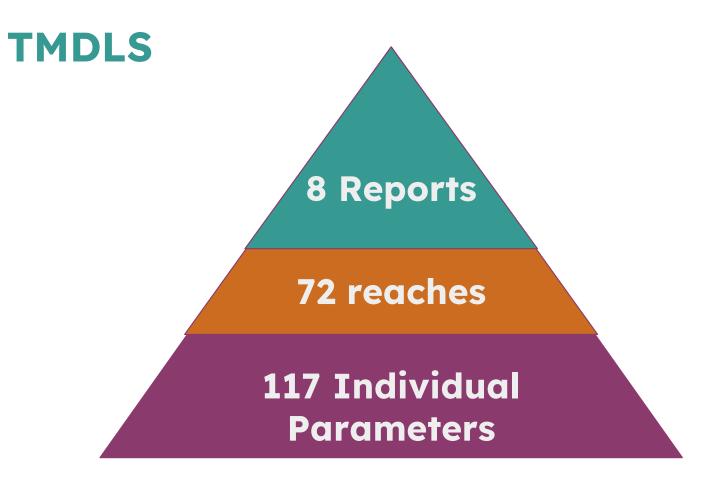

- Eliminate language no longer applicable
- Align *E. coli* assessment requirements with other states
- Add impairments for Fish Consumption
- Eliminate the minimum sample requirement in favor of statistical analysis
- Utilize Narrative Standards for impairment decisions

Total Maximum Daily Loads

Underground Storage Tanks Solid & Hazardous Waste Remedial Projects

Underground Storage Tanks

Underground Storage Tank (UST) Revolving Fund Update

- On June 18, 2024, Arizona House Bill 2897 (Chapter 209) was signed into state law.
- This bill transferred \$20 million from the UST revolving fund to the state general fund.
- Due to this funding transfer, the UST program had to modify the level of financial assistance;
- ADEQ has contracted for an Actuarial Analysis of the Fund.

UST Financial Assistance Program Impacts for Fiscal Year 2025

ADEQ has made the following changes to the UST programs

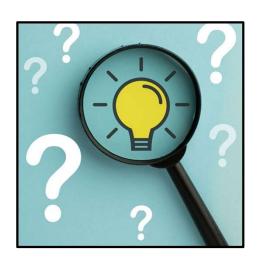

- Implementing prioritization for the Corrective Action Preapproval Program
- Reducing work in the State Lead Corrective Action Program
- Suspending acceptance of new applications for the Tank Site Improvement Program (TSIP)
- Continuing suspension of the State Lead Noncorrective Action Program

Updated information and forms: <u>azdeq.gov/USTProgram</u>

UST Corrective Action Preapproval Program Prioritization

- As of February 2025, 105 facilities (52% of facilities with an open release) are using the preapproval program
- The funding is approximately \$14.6M; however, the amount in the corrective action allocation for FY25 is \$6.7M.
- In response to the reduced funding, ADEQ has updated the associated forms, internal processes, and website.
- Preapproval Program information:
 azdeq.gov/ust/preapproval-program
- FAQs:
 azdeq.gov/ust-preapproval-program-faqs

Solid & Hazardous Waste

Solid Waste Fees

- Authorizing legislation was signed April 9, 2024
- Fees were effective on Jan. 1, 2025
- Updated existing fees
- Established 16 new fees
- Engagement process was undertaken with 12 stakeholder meetings leading up to the public hearing

Recycling

Education/Outreach

- Recycle Myers video series
- Recycling Locator/Dashboard on ADEQ website

ADEQ Recycling Grant Program

- Awarded \$950,000 to 12
 grant projects in FY24 to a
 university, a high school,
 4 cities, 6 other non-profits
- Hoping for FY26 Recycling
 Grant Program appropriation

Solid Waste Infrastructure for Recycling Grant

- Solid Waste & Materials
 Management Plan
 - Public input meetings in 2024,
 over 150 comments received
 - Comments are driving next round of industry/economic development workshops covering 7 material streams
 - Anticipated May/June 2025
 - In coordination with ASU

Pollution Prevention (P2)

New simplified reporting guidance for facilities in the P2 Program:

- Process flow
- User guides
- Templates

BIL P2 Automotive Maintenance and Repair Grant

- Bilingual training portal for automotive facilities to identify and implement source reduction activities
- 5 sections with videos and supplemental guidance

Hazardous Waste

EPA's third rule regarding e-Manifest was effective Jan. 22, 2025.

Highlights include large and small quantity generators requirement to register in RCRAInfo to:

- Access final signed manifests from receiving facilities
- Submit exception reports electronically (beginning on Dec. 1, 2025)

Small quantity generator re-notifications are due on Sept. 1, 2025 through myDEQ.

Remedial Projects

Brownfields

- Program expansion continues
- Increased grant awards over last 5 years to \$4.4M
- 45 Projects for FY25: phase I, II and clean up
- Established the Brownfields UST
 Orphan Site Program

Water Quality Assurance Revolving Fund (WQARF)

- 48th Street & Indian School Road
 Proposed Remedial Action Plan
 (PRAP) completed
- West Central Phoenix East Grand Avenue
 Record of Decision completed
- 56th Street & Earll Drive
 PRAP has 90-day public comment in March 2025

Voluntary Remediation Program (VRP)/CERCLA

- Clarkdale Residential Town Cleanup
 Completed, 597 properties remediated
- Clifton Residential Town Cleanup
 Completed, 526 properties remediated

Thank you!
